

Profiles in Healing

The quest for a solution

brings relief to heart patients.

Shortness of breath. Dizziness. Constant and debilitating exhaustion. Living with the symptoms of heart disease can be little more than existing. Thanks to Dr. Bishop's quest to find relief for such patients Upland Hills Health became one of the first healthcare organizations in Wisconsin to offer EECF therapy. The counterpulsation therapy allows heart patients to stimulate new coronary artery growth. That means patients merely "existing" have a great chance of becoming more active and returning to a normal lifestyle.

EECF is just one of the innovations that Dr. Bishop has helped bring to Upland Hills Health. "Medicine is ever changing," explains Dr.

Bishop, "and it is our role as caregivers to continuously research and invest in advancements that serve our patients." Dr. Bishop's expertise along with his drive to help patients is an unbeatable combination for those in his care.

Dr. Bishop is just one of the many exceptional people at Upland Hills Health. Dedicated to healing with a love of his fellow man—he is making a real difference to the people of our community.

Dr. Bishop practices at the Mineral Point Medical Center 987-2346 and the Dodgeville Medical Center 935-2308
